Brief Description:

The CREMLINplus kick-off meeting of the Subcommittee on the instrumentation for studies of Large-Scale Structures of WP3 was conducted on the 23 November 2020 via videoconference.

The meeting was attended by 22 European and Russian participants, among which there were members of the Large-Scale Structures Subcommittee, researchers in charge of constructing LSS instruments for the PIK reactor, heads of LSS instruments division, instrument responsables, scientific advisers – employees of NRC KI PNPI and foreign advisers.

The aim of the kick-off meeting was to present and explain the overall work plan and structure of the project as well as to clarify roles and align expectations.

In an introductory speech, NRC KI PNPI's Deputy Director for International Activity, Sergey Grigoriev, explained the objectives, tasks, and structure of WP3 and told about the expectations of NRC KI PNPI from LSS Subcommittee. His talk was followed by another introductory talk by NRC KI PNPI's Deputy Director for Science Vladimir Voronin, who told about an update on the status of the PIK reactor and its instrumentation program. Liubov Azarova (NRC KI PNPI) spoke about the present-day status of SANS instruments at PIK, Yuri Chetverikov (NRC KI PNPI) – the present-day status of a SESANS instrument at PIK, and Yuri Kirienko (NRC KI PNPI) presented the overview of PIK neutron guides for LSS instruments at PIK. All these talks contributed to providing insight into the state of the art in the area of LSS instruments among the new members of the LSS subcommittee. The new information was discussed in an hour-long closed session attended by the LSS subcommittee members only.

Materials from the kick-off LSS subcommittee meeting, including the agenda, available slides from the talks, and the minutes of the meeting can be found on PNPI website [<https://oiks.pnpi.spb.ru/cremlinplus-pnpi>].
